

PXF Series

Temperature Controllers

Exceeding Your Expectations...

- ✓ High Speed and High Accuracy
- ✓ Multi-Drop Master Function
- ✓ Universal Input

PXF series is a winner of the Good Design Award 2017 organized by the Japan Institute of Design Promotion.

Superior Versatility and Flexibility for a Wide Range of Applications

Multi-Functional to Suit Your Needs

In addition to 9 types of temperature control functions including on-off control, heating/cooling control, and 2-degrees-of-freedom PID, useful functions such as multi-drop control using RS-485 network and simple watt-hour monitoring are available. All these features make PXF practical for any applications.

See Pages 4-5 for control features and Pages 6-7 for functions.

RS-485 Communication (option)

SV can be transmitted to multi-PXFs through communication. Synchronous temperature-rise control is available in combination with 2-degrees-of-freedom PID.

Universal Input

Tallest PV Characters in the Industry

Bright and clear white PV display for optimal viewing

Compact Design

With only 58-mm depth, compact enough to be installed on small equipment

Size Selection

3 different sizes, with a depth of 58 mm

Parameter Setting Available on PC

Parameter loader software is download free from our website. Optional USB cable enables PXF to be connected to and powered from PC.

DIN-rail mountable socket type

Easy wiring and replacement

PXF4 Socket type
48×48×85.7 mm

Advanced Control Functions

Parameter setting is available using the front keys or a PC with Fuji Electric's loader software.

Standard Functions

1 On/off Control Simple and Basic Control

When process value (PV) is below the set value (SV), PXF turns on the output to energize the heater, and vice versa. In this way, PXF keeps the temperature constant by turning the output on and off based on the SV as a threshold.

2 PID Control with Auto Tuning Typical Control Based on PID Theory

* Overshoot may occur due to external disturbance.

Molding Machine

Start/stop of auto tuning can be commanded externally.

PID Auto Tuning

The controller calculates optimal PID parameters. PXF has 2 types of auto-tuning functions; the standard type (auto-tuning with SV used as reference) and the low SV type (auto-tuning with the value 10% below SV used as reference).

Standard type

Low-PV type

3 Fuzzy Control with Auto Tuning Suppresses Overshoot by Fuzzy Calculation

By monitoring PV, PXF suppresses overshoot without lengthening startup time. At the same time, it can quickly deal with external disturbances.

4 2-Degree-of-Freedom PID with Auto Tuning Combined Method for Stable Control

Suppresses overshoot and undershoot occurs at startup or at SV change, or by external disturbances.

5 Open-Loop Supported PID2 Control Suppresses Overshoot

Reduces overshoot in the processes where the controlled equipment is power cycled.

6 Self Tuning Control Auto-Tuned PID for Changing Temperature

At power up, SV change, or during external disturbance, tuning is made automatically so that the PID parameters are re-optimized.

*For some objects of control, PID values cannot be optimized.

7 Simple Program Control (Ramp Soak Function) Up to 64 Steps

PXF automatically changes SV to the preset values at preset times. You can set up to 64 steps and 15 types of operation patterns. For example, when you bake four kinds of bread, you can divide 64 steps into four patterns to set suitable temperature for each bread.

- Basic functions
 - [h · min] or [min · s]
 - Guarantee soak
 - Repeat action
 - PV start
 - Delay start
 - Power restoring function

- Operation

You can start/stop/suspend the operation using a user key, parameter setting, digital input, or communication.

- Number of steps and patterns

Steps	Patterns
64	1
32	2
16	4
8	8

Controlling Temperature Gradient of Furnace by heating patterns

Ramp Soak Function

Temperature rise/fall pattern is controlled by setting a heat pattern having a gradient. You can externally start or reset the pattern.

Optional Functions

1 Heating and Cooling Control with Dual Output

* For the cooling side proportional band, set a coefficient with respect to the heating side proportional band. (Works as on-off control if coefficient is zero.)

Energy Savings in Livestock Barns

Both heating and cooling are controlled with one temperature controller using its two control outputs. Power consumption can be curbed by controlling a cooling fan motor with inverter.

2 Motorized Valve Control Valve Opening/Closing is Available

- Position feedback control based on motorized valve position signal
- Servo control without valve position signal

Heating/Cooling Control of Air Conditioner

Variety of Functions

Expanding the Uses of Temperature Controllers and Improve the User Experience

Standard Functions

1 SV and PID selection Easy Switching Among 8 Presets

This enables optimum PID setting for changing process, materials, or PV. You can perform SV selection only, PID selection only, or PID selection according to PV.

2 Soft Start Saves Energy at Startup

Prevents the output being maximum when turning on the equipment (including the temperature controller). This is useful for suppressing the load at equipment startup.

3 Simple Watt-Hour Metering Function Tells You the Energy Consumption

If you use an optional current transformer (See page 10). Approximate monitoring is also available without CT.

4 Operating Days Alarm For Well-Timed Maintenance

Indicator or alarm output alert you when the number of days operated has reached the limit you set.

Optional Functions

1 Re-transmission Output Temperature Signals to External Devices

Cost savings achieved by eliminating the need for an extra temperature sensor

- Output signal : 0–20 mA DC, 4–20 mA DC, 0–5 V DC, 1–5 V DC, 0–10 V DC, or 2–10 V DC
- Process value (PV), set value (SV), control output (MV), or PV-SV (DV)

2 Heater Burnout Alarm Quickly Informs You a Failure

- A current transformer (CT) is required.
- The alarm action point must be configured beforehand.

3 Alarm Output Up to 5 Alarms (PXF4: up to 3)

	Alarm type	Action diagram
Absolute value alarm	Upper limit absolute value	
	Lower limit absolute value	
	Upper limit absolute value (with hold)	
	Lower limit absolute value (with hold)	
Deviation alarm	Upper limit deviation	
	Lower limit deviation	
	Upper and lower limits deviation

	Range upper and lower limits absolute value	
	Range upper and lower limits deviation	
	Range upper limit absolute value and lower limit deviation	
	Range upper limit deviation and lower limit absolute value	

4 Digital Input SV Can be Switched Externally

SV change, AT start, timer startup, program selection, start/stop/reset, PID changeover, etc.

5 Remote SV Input SV Can be Configured Externally

- Input signal: 0-5 V DC, 1-5 V DC, 0-10 V DC, 0-20 mA DC, or 4-20 mA DC
- Input impedance: About 1 MΩ

6 RS-485 Communication

- User address mapping function
Users can create a list of necessary parameters (max. 32 words) for quick data acquisition on that data set.
Communication speed: max. 115.2 kbps

Address	Parameter
30001	PV
30002	SV(Read)
30003	DV
30004	MV1
⋮	⋮
40003	SV(Write)
40004	STBY

40008	D
⋮	⋮
⋮	⋮
⋮	⋮

- Multidrop master function
Synchronous temperature-rise control is available in combination with 2-degrees-of-freedom PID.

- Parameter copy function
Parameter values can be copied to multiple PXFs simultaneously.
- Communication with PC, programmable operation display, or PLC

Product Lineup

Re-transmission output (option)

No. of points	1
Type	Current/voltage output (0 to 20 mA DC/4 to 20 mA DC/0 to 5 V DC/1 to 5 V DC/ 0 to 10 V DC/2 to 10 V DC) <ul style="list-style-type: none"> Guaranteed output range: 0 to 21 mA DC/0 to 10.5 V DC Accuracy: ±0.2%FS (±5%FS at 1 mA or smaller) Resolution: 10,000 MIN. Load resistance: 500 Ω MAX. (current), 10 kΩ MIN. (voltage)
Output cycle	100 ms
Output contents	PV, SV, DV, MV
Additional function	Scaling function

Display and keys

Type	LCD (with backlight)
Indication contents	Process value indication: 11-segment, 4-digit [white] Setpoint indication: 11-segment, 4-digit [green] Screen No. indication: 7-segment, 4-digit [orange] Status indication: 42 indicator lamps
Luminance setting	possible (4 steps)
Keys	Sheet type keys (with emboss), 5 keys

Control functions

ON/OFF control	Refer to page 4.
PID control	<ul style="list-style-type: none"> Dual control (heating/cooling) PID parameters determination: Auto tuning
Fuzzy PID control	<ul style="list-style-type: none"> Dual control (heating/cooling) PID parameters determination: Auto tuning
Self tuning control	Refer to page 5.
PID2 control	<ul style="list-style-type: none"> Dual control (heating/cooling) PID parameters determination: Auto tuning
2-degrees-of-freedom PID	<ul style="list-style-type: none"> PID parameters determination: Auto tuning
Position proportional PID (servo) with position feedback	<ul style="list-style-type: none"> Full stroke time: 30 seconds MIN. (not available for PXF4)

Control parameters

Proportional band (P)	0.1% to 999.9%
Integration time (I)	0 to 3200 s (invalidated when I = 0)
Differential time (D)	0.0 to 999.9 s (invalidated when D = 0)
Control cycle	100 to 900 ms (in 100 ms), 1 to 99 s (in seconds)
Anti-reset windup	0 to 100% of measurement range
Hysteresis band	50% of measurement range (at 2-position control only)
Number of SV and PID patterns	8: Changed by any of parameter setting, digital input, communication, user function keying, zone change.

Control mode

Mode	Auto/Manual/Remote *During 2-position control in Manual mode, 2-position manual operation with MV = 100% or 0% is operated.
Mode changeover:	<ul style="list-style-type: none"> Auto ↔ Manual: Balanceless · bumpless Auto/Manual → Remote: Balance · bumpless Auto/Manual ← Remote: Balance · bumpless

Alarm

Number of alarm	Up to 5 (depends on the number of DO)
Alarm type	Process value (upper limit/lower limit, absolute/deviation, range), main unit error, etc.(non-excitation, delay, latch, timer function option provided)
Heater current alarm function (option)	Current transformer (CT) is to be prepared separately (see page 9.)
Detectable range	1 A to 100 A
Detected current resolution	0.1A
Setting resolution	0.1A
Hysteresis	0.0 to 100.0 A

RS-485 communication (option)

No. of points	1 point
Physical specifications	EIA-485
Protocol	Modbus-RTU
Communication method	Half-duplex bit serial, asynchronous communication
Code type	Data length: 8 data bits. Parity: Odd, even, none.
Baud rate	9600 bps, 19200 bps, 38.4 kbps, 115.2 kbps
Connection	Up to 32 units
Communication distance	Up to 500 m (total connection length)
Additional function	<ul style="list-style-type: none"> Multidrop master function The function in which slave devices can be operated by a master device by connecting several temperature controllers. Programless communication The function in which a temperature controller can be connected to a PLC without program. Supported PLCs: Mitsubishi PLC Q series Siemens PLC S7 series

Operation and storage conditions

Operating temperature	-10°C to 50°C
Storage temperature	-20°C to 60°C
Operating/storage humidity	90%RH or less (Non condensation)
Warm-up time	30 min MIN.
Vibration	during transportation: 9.8 m/s ² (1 G) or less
Impact	during transportation: 294m/s ² (30 G) or less

Enclosure

Installation	Panel mount
External terminals	Screw terminals, M3
Case	<ul style="list-style-type: none"> Material: ABS, PPO Non-combustibility grade: UL94V-0 equivalent Color: Black
Protection structure	<ul style="list-style-type: none"> Panel front side: IP66, NEMA-4X equivalent (When the panel is mounted using our genuine packing. Not water-proof if mounted closely together.) Body: IP20 equivalent (slits on top and bottom) Terminals: IP00 equivalent. Terminal cover can be mounted optionally.
Dimensions	Refer to page 10.
Weight	PXF4: approx. 100 g, PXF5: approx. 170 g, PXF9: approx. 220 g

Customizable function and Program (ramp/soak) function

Number of program steps:	64 steps × 1 pattern, 32 steps × 2 patterns, 16 steps × 4 patterns, or 8 steps × 8 patterns (1 step = 2 segments)
Control option	Control by digital input Status output by digital output
Basic functions	<ol style="list-style-type: none"> Segment time can be set in "Hour, Minutes" or "Minutes, Seconds" Guarantee soak Repeat action PV start Delay start Power restoring function
Memory backup	EEPROM

User key

Assignable functions	Auto/Manual change, Standby ON/OFF change, remote SV change, ramp/soak change, etc.
----------------------	---

Password function

3-level password

Simple watt-hour metering function and operating days alarm

Simple watt-hour metering function	<ul style="list-style-type: none"> By connecting a current transformer (to be prepared separately), electric power consumption of the heater can be displayed. (Electric power is calculated based on the fixed voltage value you set.) Current transformer (CT) is to be prepared separately (see page 10.) Current detection range: 1 A to 100 A
Operating days alarm	<ul style="list-style-type: none"> Indicates the number of days the controller has been operated and activates alarm output (optional) when it exceeds the setpoint. Useful for preventive maintenance because it let you know the appropriate time for maintenance work.

Data backup at power outage

Storage device	Non-volatile memory
----------------	---------------------

Self-diagnosis

Type	Program error supervision by watchdog timer
------	---

Table 1 Input type and range

Input type	Code (PvT)	Measurement range [°C]	Minimum input increment [°C]	
RTD	Pt 100	PT1	0.0 to 150.0	0.1
		PT2	0.0 to 300.0	0.1

Connection Diagram

For the versions that have no alarm (8-pin socket)

For the versions that have two alarms (11-pin socket)

*1: The terminal layout differs from that of PXW4/PXZ4/PXV4.

*2: Check the power supply voltage before installation.

*3: Terminal allocation is different from PXR4. A 250Ω shunt resistor is not required.

Specifications

General specifications

Power supply	100 V (-15%) to 240 V (+10%) AC, 50/60 Hz; 24 V ($\pm 10\%$) DC/AC
Power consumption	10 VA MAX. 100 to 240 V AC
	5 VA MAX. 24 V DC/AC
Insulation resistance	20 M Ω or more (at 500 V DC)
Withstand voltage	Power source \leftrightarrow all terminals: 1500 V AC for 1 min Relay contact output \leftrightarrow all terminals: 1500 V AC for 1 min Between others 500 V AC for 1 min

Process value input

Number of input	1
Input setting	Programmable scale
Input signal	See Table 2 (Universal input: thermocouple, RTD, voltage, current)
Standard measurement range and input type	See Table 2
Indication accuracy (at Ta = 23°C)	<ul style="list-style-type: none"> Thermocouple input: $\pm 0.5\%$FS ± 1 digit $\pm 1^\circ\text{C}$ *Exceptions: <ul style="list-style-type: none"> Thermocouple B: 0 to 400°C: no accuracy assurance Thermocouple R: 0 to 500°C: $\pm 1\%$FS ± 1 digit $\pm 1^\circ\text{C}$ Thermocouples: -200 to -100°C: $\pm 2^\circ\text{C}$ ± 1 digit RTD input: $\pm 0.8^\circ\text{C}$ ± 1 digit or $\pm 0.2\%$ ± 1 digit of indicated value, whichever is larger mV input, voltage input, current input: $\pm 0.3\%$FS ± 1 digit *Note that the sensor should be sufficiently warmed up to secure the accuracy
Temperature effect on sensitivity	$\pm 0.3\%$ FS/ 10°C
Indication resolution	See Table 2
Input sampling rate	50ms
Input impedance	<ul style="list-style-type: none"> Thermocouple, mV input: 1 MΩ or more Current input: 150 Ω or less (built-in diode) Voltage input: About 1 MΩ
Variation by signal source resistance	<ul style="list-style-type: none"> Thermocouple, mV input: $\pm 0.3\%$FS ± 1 digit per 100 Ω Voltage input: $\pm 0.3\%$FS ± 1 digit per 500 Ω
Allowable wiring resistance	RTD: 10 Ω or less (per wire)
Allowable input voltage	<ul style="list-style-type: none"> DC voltage input: within ± 35 V Current input: within ± 25 mA Thermocouple, RTD, mV input: within ± 5 V
Noise reduction ratio	<ul style="list-style-type: none"> Normal mode: 40 dB (50/60 Hz) Common mode: 120 dB (50/60 Hz) Between input and power supply: $\pm 1^\circ\text{C}$ at 220 V AC, 50/60 Hz
Input correction	<p>(a) User adjustment: $\pm 50\%$FS for each of zero and span point</p> <p>(b) Process value shift: $\pm 10\%$FS</p> <p>(c) Input filter: 0.0 to 120.0 s (filter OFF if set at 0.0)</p> <p>(d) Square root extraction: -0.1 to 105% (OFF if set to -0.1%)</p>
Overrange, underrange	<p>Out of the range between -5% and 105% FS (accuracy not guaranteed between -5 and 0, and between 100 and 105% FS)</p> <p>*Exceptions:</p> <ul style="list-style-type: none"> JPt, Pt, 0-10 V DC: out of the range between -2% and 105% FS Thermocouple E: out of the range between -5% and 102% FS

Control output

Number of points	1
Type selected among (1) to (3) below	<p>(1) Relay contact output (SPDT)</p> <ul style="list-style-type: none"> Proportional cycle: 1 to 150 seconds Contact structure: SPDT (single pole double throw) Contact capacity: 250 V AC/30 V DC, 5 A (resistive load) Mechanical life: 50 million operations MIN. (100 operations/min) Electrical life: 100,000 operations MIN. (rated load) <p>(2) SSR drive output</p> <ul style="list-style-type: none"> Proportional cycle: 1 to 150 s ON voltage: 12 V DC (between 10.7 and 13.2V DC) OFF voltage: 0.5 V DC or lower Maximum current: 20 mA DC Load resistance: 600 Ω MIN. <p>(3) Current output (4 to 20 mA DC)</p> <ul style="list-style-type: none"> Accuracy: $\pm 5\%$FS Load resistance: 500 Ω MAX.

Alam output (option)

Number of outputs	Relay contact output Up to 2
Output specifications	<p>Relay contact output</p> <p>Contact structure: SPST (single pole single throw)</p> <p>Contact capacity: 250 V AC/30 V DC, 1 A (resistive load)</p> <p>Minimum ON/OFF current: 10 mA (5 V DC)</p> <p>Mechanical life: 20 million operations MIN. (100 operations/min)</p> <p>Electrical life: 100,000 operations MIN. (rated load)</p>
Alarm kind	Absolute alarm, deviation alarm, zone alarm, upper and lower limit, and hold function available for each kind of alarms. Alarm latch, Excitation/non-excitation selecting function provided.
Output cycle	100 ms

Display and keys

Type	LCD (with backlight)
Indication contents	<p>Process value indication: 11-segment, 4-digit [white]</p> <p>Setpoint indication: 11-segment, 4-digit [green]</p> <p>Screen No. indication: 7-segment, 3-digit [orange]</p> <p>Status indication: 23 indicator lamps</p>
Keys	Five embossed keys, 5keys

Control functions

ON/OFF control	see page 4
PID control	PID parameters determination: Auto tuning
Fuzzy PID control	PID parameters determination: Auto tuning
Self tuning control	see page 5
PID2 control	PID parameters determination: Auto tuning

Control parameters

Proportional band (P)	0.0-999.9% (On/off control when P=0)
Integral time (I)	0 to 3200 s Integral time control invalidated when I = 0.
Differential time (D)	0.0 to 999.9 s Differential time control invalidated when D = 0.
Control cycle	100 to 900 ms (in 100 ms), 1 to 99 s (in s)
Anti-reset windup	0 to 100% of measurement range
Hysteresis band	50% of measurement range (available only during the on/off control)

Control mode

Mode type	Auto, Manual *In the manual mode on/off control, available MVs are 100% and 0%.
Mode switching	Auto \leftrightarrow Manual: Balanceless/bumpless

Operation and storage conditions

Operating ambient temperature	-10 to 50°C
Storage temperature	-20 to 60°C
Operating/storage ambient humidity	90%RH MAX. (no condensation)
Warm-up time	30 min MIN
Vibration	During transportation 9.8 m/s ² (1G) or less
Impact	During transportation: 294 m/s ² (30G) or less

Enclosure

Mounting method	Panel flush mounting, DIN rail mounting (DIN rail mounting requires the dedicated socket.)
External terminals	8-pin or 11-pin socket, M3.5 screw terminals *The socket is a separate order item.
Case	<ul style="list-style-type: none"> Material: ABS, PPO Flammability: equivalent to UL94V-0 Color: Black
Protection structure	<ul style="list-style-type: none"> Panel front side: equivalent to IP66 and NEMA 4X (When the panel is mounted using our genuine packing. Not water-proof if mounted closely together.) Body (slits on top and bottom): equivalent to IP20
Dimensions	48 (W) x 48 (H) x 85.7 (D) mm
Weight	Approx. 200g

Customizable function

Parameter mask function	You can switch between show/hide of parameters.
Program (ramp/soak) function	<ul style="list-style-type: none"> Number of program patterns: 1 or 2 8 ramps and 8 soaks in total
User key	You can assign the following functions to the user key: auto/manual switching, standby on/off, etc.

Data backup at power failure

Storage device	Non-volatile memory
----------------	---------------------

Self-diagnosis

Type	Program error supervision by watchdog timer
------	---

Please read the following instructions carefully before operating the Digital Temperature Controller

Over-Temperature Protection

Any control system design should take into account that any part of the system has the potential to fail.

For temperature control systems, continued heating should be considered the most dangerous condition, and the machine should be designed to automatically stop heating if unregulated due to the failure of the control unit or for any other reason.

The following are the most likely causes of unwanted continued heating:

- 1) Controller failure with heating output constantly on
- 2) Disengagement of the temperature sensor from the system
- 3) A short circuit in the thermocouple wiring
- 4) A valve or switch contact point outside the system is locked to keep the heat switched on.

In any application where physical injury or destruction of equipment might occur, we recommend the installation of independent safety equipment, with a separate temperature sensor, to disable the heating circuit in case of overheating.

The controller alarm signal is not designed to function as a protective measure in case of controller failure.

Information in this catalog is subject to change without notice.
Read the instruction manuals thoroughly before using the products.
